

Instructions using import from web:

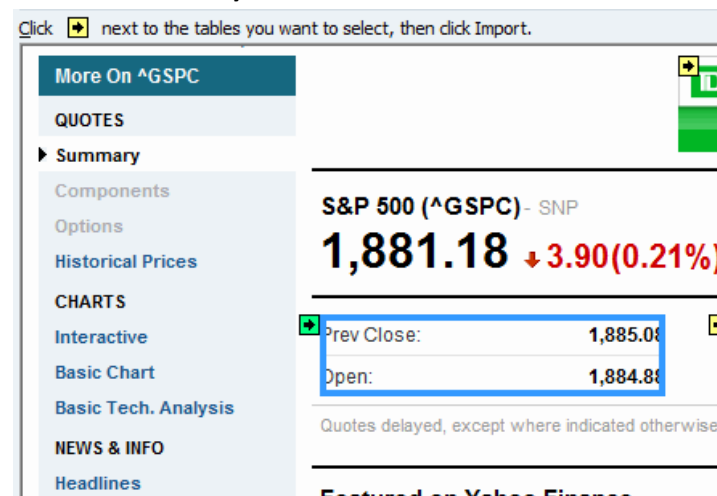

1. Under the “Data” tab in the menu ribbon select “From Web”.

2. Excel's built in browser will launch.

3. Go to the website you would like to extract data from.

Note yellow arrows will appear next to data tables that can be imported into Excel.

4. When the yellow arrow is clicked it will become a check mark, indicating that the data has been selected.

Click  next to the tables you want to select, then click Import.
